Hi Mardy and Bijaya,

The approved screening in 2012 was for the water licence application only, it does not include projects conducted under the water licence. The water licence and the subsequent projects under the water licence are two different things. Because the details of the water licence amendment application remain the same as the original application submitted in 2012, the EISC was able to extend the water licence application approval (the attached letter originally forwarded to EISC on June 15, 2017). This approval however does not dismiss Shell from completing the questionnaire and project descriptions for future projects at Camp Farewell. The water licence application and proposed projects under the application are treated separately.

I hope this helps. If you have any further questions, please let me know.

Thanks,
Nicole

Subject: FW: Camp Farewell - 2016 Decommissioning and Remediation Program

Good Morning Nicole,

Please provide the additional information as requested on an email below sent on June 20, 2017 4:11 PM:
Why did the EISC require Shell to submit the 2016 Decommissioning and Reclamation Plan when the project was already screened in 2012?

Please submit your response as soon as possible and Cc to me.

Sincerely,

Bijaya

Hi Mardy,

Sounds good, we'll make sure to issue the Project Description to the IWB going forward.

Thanks,
Nicole

Hi Nicole

The IWB is on the distribution list for EISC projects going through their screening processes. The IWB participates only when an Information Request is provided to the IWB by the EISC. The EISC process is separate from the IWB process.

The IWB will require a project description for all future activities for Camp Farewell to be submitted in a timely manner to ensure the activities are within the scope of the existing water licence and to keep the water licence file up to date.

Thank you

Mardy

Hi Mardy,

The EISC required that a project description be completed for the 2016 decommissioning and remediation program. The IWB is included in the EISC distribution list for the project description, however it sounds like for some reason the Project Description was not circulated to the IWB. I will forward the Project Description for any future projects directly to you. Please note, there will not be a Project Description submitted this year as there will be no activities at Camp Farewell in 2017.

The 2015 Closure and Reclamation Plan stated: "Permanent Closure activities are expected to continue in 2016 and 2017; a schedule for the completion of permanent closure activities at the Site is undefined at this time." Permanent closure activities are discussed in Section 4 of the 2015 Closure and Reclamation Plan and consist of dismantling and removal of remaining infrastructure, remediation and treatment of impacted soils, backfilling with clean on-site fill, and revegetation.

If you require further clarification or have additional questions, please don't hesitate to contact me.

Thanks,
Nicole

Subject: Camp Farewell - 2016 Decommissioning and Remediation Program

Hi Nicole

Can you clarify to the IWB as to why IEG on behalf of Shell Canada had to submit a project description to the EISC on April 26, 2016 for the 2016 Decommissioning and Remediation Program? The IWB was not copied on these documents. The IWB accepted and approved the 2015 Closure and Reclamation Plan. Was there any additional projects included in the 2016 Decommissioning and Remediation Program that is not approved in the 2015 Closure and Reclamation Plan.

Please clarify these discrepancies for the IWB. The information provided will assist the IWB in the processing of the water licence extension.

Thank you

Mardy
